

# Data types and Variables

---

## Problem 1. JavaScript literals

- Assign all the possible JavaScript literals to different variables.

## Problem 2. Quoted text

- Create a string variable with quoted text in it.
- For example: ``How you doin'?, Joey said``.

## Problem 3. Typeof variables

- Try `typeof` on all variables you created.

## Problem 4. Typeof null

- Create null, undefined variables and try `typeof` on them.
